**Height/Spread:** H 51-60cm, S 31-40cm

**Aftercare:** Easy

**Sow/Plant:** Sow January to March, Plant late May to June

**Harvest:** Late-June to August

## Additional Information:

**Description:** Allium cernuum is a beautiful perennial plant that produces pretty clumps, with clusters of nodding blooms, reminiscent of mini chandeliers. Native to the Great Lakes in the USA and Canada, where the leaves of the Allium cernuum are used just like chives with both the leaves and the flowers being edible. The flowers produced come in a stunning shade of baby pink, ideal for filling beds and borders, containers and patio pots with a wonderful display. With white stamens protruding from the beautiful pink flowers you will fall in love with flowers all summer long. Incredibly easy to grow, one established plant will very quickly form these delightful clumps of flowers.

## Growing Information

Sow Jan-March indoors or in a cold greenhouse 0.5cm (¼") deep in trays of good quality compost and keep moist. Germination can take up to 28 days and can be erratic. When large enough to handle, transplant to individual pots and grow on. Harden plants off and let them grow on in their pots until autumn when they should be planted out into their final flowering position 30cm (12") apart. Plant in a rich, well-drained soil, preferably in a sunny or partially shaded area of your garden.

Once your seeds are established, caring for them becomes relatively easy. Water regularly and deadhead the wilting flowers to encourage new growth.
